## Krost Shelving & Racking

manufactures high quality, innovative and comprehensive racking and shelving solutions at exceptional value. Our experienced consultants will custom design a system to perfectly match your requirements and advise you on achieving a cost effective space solution that will: Maximize utilisation of space, increase productivity and efficiency, enable more effective stock management and improve safety.

### BOLTED STEEL SHELVING

Durable shelving ideal for use in warehouses, offices and retail stores.

**Open Braced Bolted Steel Shelving** is the most basic and economical shelving design for general purpose use. Back and sides are open, except that sections are stabilised by means of cross braces on the back and sides.

**Closed Back and Side Bolted Steel Shelving** units are closed on three sides with steel panels to provide stability, protection of the items stored and to promote cleanliness of these items. When units are joined side by side and back to back, a common side or back panel is used between the two units achieving a large cost saving.

- These units are assembled into rows of units side by side and back to back and are of sufficient strength to support Mezzanine Floors.
- Krost's storage experts will design the correct storage solution to maximize your storage space in the most economical manner.
- Site visits, Computer Aided Designs (CAD) and quotations are provided free of charge.

### RIVET SHELVING

Durable shelving ideal for use in warehouses, offices and retail stores.

**Single Rivet High Density Shelving** uses rivet beams on intermediate levels, and double rivet beams at the top and bottom for rigidity.

Krost single rivet beam high density shelving is designed to provide for maximum vertical clearance between shelves. Access to stored items from all sides is possible because side and back cross braces are not necessary for stability.

Krost Rivet Shelving is designed to provide an economical solution for the storage and display of retail, wholesale or industrial goods. Installation can be done without special tools in a minimal amount of time. All you need is a rubber mallet. Shelves can be adjusted every 38 mm which allows you to custom design the unit to fit your load size. Krost Rivet Shelving can be decked with either chipboard, plywood or steel decking.

Krost Shelving has been assessed and found to satisfy the requirements of ISO 9001 – 2008 Quality Certified in respect of the manufacture of all types of Shelving, Racking and Mezzanine Floors.

All our products have baked epoxy powder coated finish and pass through a 5-stage chemical cleaning process Powder is applied to an average thickness of 55 microns as per SABS 1274-1979 type 2 method 141 prior to oven baking at 210° Celsius for 15 minutes. All paint specifications are independently verified to conform to SABS standards by Corrosion Advisory Technical Services.

Manufactured in South Africa since 1965

# GONDOLA SHELVING

The complete merchandising and display concept.

The **Krost Shelving Gondola System** has been so ingeniously designed that it can be installed in a matter of hours without any substantial disruption of business. All units, shelves and fittings are interchangeable, and can be assembled with ease and speed. The Gondola System is ideally suited for use in a wide range of retail outlets such as pharmacies, supermarkets, bottle stores, cafe's and hardware stores etc. Gondola shelving can be wall mounted or free standing, single or double sided.

# MEZZANINE FLOORS

Add extra floor space within the shell of an existing building.

**Structural Mezzanine Floors** leave a large open area below for maximum working space. This can be utilised for various different uses i.e. office area, packing area, storage area or receiving or dispatch area.

**Rack Supported Mezzanine Floors** is a very practical way of utilising the (often wasted) space above racking. This form of Mezzanine is built from pallet racking materials and is generally the most cost effective way of building a mezzanine. Storage is gained above the structure with an open deck, plus the support for the deck is usable pallet racking that can be left open or utilised as shelving.

# RACKING

Fully adjustable boltless or bolted light, medium and heavy duty racking systems to maximize your space.

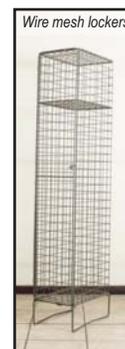

- VNA (Very Narrow Aisle) Racking** is specially designed to maximise pallet storage, while still allowing individual access to all pallets. Aisle width varies from 1,7 meters to 2.2 meters. The perfect solution to maximise your warehouse space.
- Selective Pallet Racking** is the most common method of storing pallets and is designed to provide ready access to every pallet.
- Selective Storage Racking** Efficient, economical use of space – ideal for low and high-rise order picking and storage applications.
- Drive-In / Drive-Thru Racking** is designed specifically for high density storage of palletised items. Recommended where multiple unit loads per stock keeping unit (SKU) need to be stored and access to every individual load not essential.
- Shuttle Racking** is a great option for high density storage with large volumes of pallets per SKU. Lanes of up to 50 pallets in depth can be stored in both a FIFO and FILO configuration.
- Cantilever Racking** provides the most efficient and economical storage of tubing, bars, timber, textile rolls, furniture and other awkward items.
- Carton Live** picking is made up of inclined platforms for optimal entry and exit of goods that are fed in and slide down by the force of gravity.
- Catwalk** We design and supply all types of racking to maximize your storage space.

# STORAGE SOLUTIONS

Lockers | Filing Drawers |  
Stationery Cupboards |  
Storage Bins | Library Shelving

Steel lockers

Wire mesh lockers

Filing cupboards

Filing drawers

Storage bins

Trolleys, mountie steps etc

Krost manufactures a wide variety of staff, hostel and gym lockers, filing cupboards, filing drawers, storage bins, library shelves and many other products.
